ALPINE

C A T A L O G

ABOVE ALL, HERE

Above All, Here.
A calling from the mountains, from our favorite ski resort.
A place to reconnect with our whole selves.
Beyond the slopes, it is a reminder to appreciate in-between moments.
The vistas, the sunlight filtering through the trees.

Sharing a fondue, a hot drink and a laugh.
This is the ALPINE LIFE. A calling for those drawn to the mountains.
A feeling that elevates us all.
It's about:
BEING HERE, ABOVE ALL.

WHAT'S NEW?

CALLING ALL OUT

Our vision of Outdoor and ALPINE LIFE adventures. Escaper is a transversal multi-season story that encompasses our Ski Touring, Backcountry, Splitboard, Mountain Biking, Hiking collections and more...

Experience the mountain's different facets on ascents and descents.

From discovery mode to wonder mode. Designed to experience nature in all seasons, in micro-adventure mode or for greater escapes, Touring, Freetouring or Resort Touring, it invites each and every one of us to go outdoors and explore the most beautiful landscapes.

CALLING ALL OUT

CALLING ALL HEROES

After Val d'Isère in 2014, and Kitzbühel four years later, it is now to celebrate Beijing 2022, and the China Great Wall, that the Band of Heroes saga is being played out this winter. This is a team spirit and passion for Racing that our champions share. But our heroes are not only those we celebrate on World Cup podiums. They include you too. You are at the heart of the action. You ski with us, with them.

CALLING ALL HEROES

UNISEX

WOMEN

Glide, thrill and win
 Band of Heroes, an XXL family in which you
 are the hero
 Hope, emotion, commitment... Competition
 is a source of inspiration
 Legends are born from human adventures.
 Today's children will be the champions
 of tomorrow
 After Sochi, Pyeongchang... Beijing, season 3
 of Band Of Heroes is arriving on snow all
 over the world

Petra **VLHOVA** (SVK)

BAND OF HEROES

Behind each champion, there is a family
 Sharing nurtures champions' growth
 Passion is the flame of competition
 BOH, the stuff of heroes/BOH, the sign
 of champions
 Before they were champions, they were
 beginners just like you. Experience shapes
 history.

Zan **KRANJEC**
 (SLO)

CALLING ALL HEROES

CALLING ALL HEROES

The Band of Heroes saga is a human adventure. It started in 2014 at the foot of the Face de Bellevarde. Four years later, it wrote a new chapter at the top of the Streif in Kitzbühel. This winter, it is in Beijing, in the shadow of the Great Wall, that the Band of Heroes saga is being played out.

From West to East, from slope to slope, the family has grown. New faces have arrived. While the original pioneers remain. As on the first day, they are showing the way. There are champions, but also amateur skiers and supporters. They talk nordic, alpine or freestyle. Rather than age, level or ski widths, they are united by desire, thrills and pleasure.

Their tracks carve out their shared values. Define what forges their bond. A burning passion for competition, the excitement of two skis behind the start gate and the indescribable joy of feeling your body weave down the slope. They are gliding towards a childhood dream, and an adult ambition.

They share this emotion intensely. With you, at the edge of a slope or in a finish area, a clenched fist punching up to the sky.

With us every day. It is for them, for this flame that lights up great sagas, that we develop the best possible equipment to support them in their quest and together intensely experience the wildest of dreams. This expertise and this constant focus on performance and innovation are reflected in the skis in Rossignol's Racing range, allowing everyone to embrace their own great emotions.

SKIS

The new 2022-2023 ski range will be packed with emotions, innovations and new features. The exceptional period we have been through has given us even more wishes, ideas and solutions to make this Alpine range a real reflection of our ambitions and expertise. While remaining true to our history and DNA, all developments feature Rossignol's special signature.

Our iconic **HERO** range has been completely redesigned. Buoyed by historic successes on the most recent World Cup podiums and looking ahead to the Beijing Winter Olympics, this range is revealing a new look supported by a new technology, V Tech, and the development of a new **MASTER ST**.

These skis are aimed at a wider group of piste skiers. Everyone is joining the Band of Heroes.

For skiers yearning for wide open spaces or those eager to get back in touch with nature, all our Freeride ranges have been redefined with the expansion of the **ESCAPER** Touring range and the introduction of skis for children and first-time buyers. The new **SENDER** range will win the hearts of pure freeriders seeking virgin terrain for first tracks.

All our developments are underpinned by a strong commitment to transformation as well as our **eco-responsible** approach to product design, introduced a few seasons ago and now applying to most of our ranges.

UNISEX p. 6

RACE HERO

For Rossignol, racing is not about age, level or medals. Dreams, hopes and desires are what matter.

At the start of a race, all these skiers share the excitement of competition and the inexpressible joy sparked by the thrill of speed.

At the start gates, they are all heroes. It is for all these heroes that we develop the best possible equipment, helping them to bring their dreams to life, transmit and share their passion and experience their most exhilarating emotions. Have you felt this thrill too? Then welcome to the Band of Heroes.

CALLING ALL HEROES

ALPINE
2022/2023

RACE | ON PISTE | ALL MOUNTAIN | FREERIDE | TOURING | FREE PROGRESSIVE | JUNIOR | TECHNOLOGY

RACE
TECHNOLOGIES

DIRECT POWER

1 LINE CONTROL TECHNOLOGY ENERGY ACTIVATOR

With a central rail integrated over the entire length of the ski, the LCT construction eliminates some of the ski's counter-flexion to ensure perfect stability and dynamic control over lines in turns. The LCT construction delivers power and energy in all circumstances and all conditions.

2 OVERSIZED SIDECUT ENERGY TRANSMITTER

By pairing the carving ski cut with the current widths under the foot, the OVERSIZED SIDECUT offers powerful precision and very good grip, including improved stability and control.

PERFORMANCE RANGE HERO

ATHLETE

How can you shave off hundredths of a second in top-level competitions?

The new HERO ATHLETE competition skis encapsulate all the innovation and expertise developed in our racing workshops with our champions from the World Cup circuit. The largest sizes are identical replicas of the skis used by our heroes who dominate World Cup podiums every weekend.

Engaged in a continuous quest for performance, Rossignol has developed the DLC, LCT and "V" Titanal technologies which give the ski maximum stability and unparalleled line control for optimum choice of trajectory.

WHO ARE THEY FOR?

Designed for all active champions, from 6 years of age for the Juniors all the way up to racers on the FIS circuit.

MASTER

How can you enjoy all the thrills of World Cup skis but with power steering?

Designed and created as World Cup skis but adapted for piste skiing with more fun radii, Hero Master skis accelerate like those of champions but with far easier carving and steering.

From now on, we no longer choose our skis depending on our height and level, but according to the type of turns we want to make.

And this year, there are 3 new ST (Short Turn) programmes with 13, 12 and 11 metre radii for more agile skis and easier carving to complement the already famous MASTER LT skis (Long Turn, 21, 19, 17, 15 metre radius).

WHO ARE THEY FOR?

For expert skiers seeking performance and power, as well as for passionate racers outside the FIS circuit (Flèches ESF, Course Master, Eurotest events, etc.).

ELITE

How can you experience the thrills of competition without suffering the constraints?

Featuring constructions and technologies inspired by World Cup skis and adapted to the needs of piste skiers, these skis carve and accelerate while delivering high comfort and tolerance.

From now on, the ELITE skis will allow demanding skiers to enjoy speed, carving and racing sensations in Long Turn (LT) or Short Turn (ST) versions, as well as catering to fans of the highly popular Multi-Turn (MT).

WHO ARE THEY FOR?

For expert skiers who like to challenge themselves on the slopes or in flèche and chamois races, and for ambitious skiers seeking to experience all the emotions of competition on the piste.

BAND OF HEROES

The 2020-21 season was an unforgettable one for the "Band of Heroes" who were flying the flag for Rossignol on all podiums. The women staged a real raid, headed up by the sparkling Katharina LIENSBERGER, the amazing Petra VLHOVA and the dynamic Perrine LAFFONT. It was a closely fought battle for the men, but our talented riders demonstrated their class in some of the biggest contests of the season.

But as Henrik KRISTOFFERSEN reminds us, in skiing "the next one is the best one", and armed with our skis and their passions, our heroes' sights are all now firmly on the upcoming Olympic season.

KATHARINA LIENSBERGER
(AUT)

- Winner of the Slalom World Cup
- Slalom and Parallel World Champion
- Bronze medallist in Giant Slalom

PETRA VLHOVA
(SVK)

- Winner of the World Cup Overall Standings
- Silver medallist in Slalom and Combined
- 3rd in the Slalom World Cup

HENRIK KRISTOFFERSEN
(NOR)

- Bronze medallist in the Slalom World Championships 2021

FEDERICA BRIGNONE
(ITA)

- Silver medallist in the Super G World Cup 2021

RIVER RADAMUS
(USA)

- Double Junior World Champion in Giant and Slalom 2019

MICHELLE GISIN
(SUI)

- Bronze medallist in the World Cup Overall Standings
- Bronze medallist in the Combined World Championships 2021

TESSA WORLEY
(FRA)

- Bronze medallist in the Giant Slalom World Cup

RAMON ZENHÄUSERN
(SUI)

- Bronze medallist in the Slalom World Cup 2021

PERRINE LAFFONT
(FRA)

- Mogul World Champion 2021
- Overall Winner of the Mogul World Cup 2021

HERO LIMITED EDITION

The Hero LTD ski is the perfect summary of racing intensity and the complex emotions that compose it. Each color represents a reflection to an emotion experienced during the race.

RED PASSION

Race passion. A deep driving passion that fully bursts in the thrill of the race, putting it all on the line, pushing everything for the win.

BLUE SERENITY

Finding the groove but being on the limit at the same time, but somehow everything seems to be in flow. There is a certain race serenity of winning runs, perfect control within the races' chaos.

YELLOW HAPPINESS

Happiness is initiated at the moment of reaching across the finish line. A sudden burst of ultimate happiness when the timing board reveals a podium, lifting of the Cup or Medal to come.

GREEN LUCK

As in all great things, and especially in sports, you need a little bit of luck.

Between the next Olympics in Beijing 2022 and the World Ski Championships in Courchevel/ Méribel 2023, every podium achieved by one of our HERO's on the World Cup, a lottery for "Giveaway products", will be held for all registered participants and owners of the HERO Limited Edition's skis... Simply, buy your Limited skis in one of our partner's skis shop and scan the QR code, registered and enter the special Rossignol HERO Limited Edition platform on our website.

MASTER

Designed and created as World Cup skis but tailored to the needs of piste skiers, the Hero Master skis are the industry benchmark for performance and control. They accelerate like the skis worn by the champions, but allow far easier carving thanks to much more clearly defined sidecuts. All the power and performance of race skis without the constraints. THE ski for expert thrill-seeking skiers and for passionate racers outside the FIS circuit (Course Master, Eurotest events, etc.).

This Hero Master series is segmented into two categories this year:

- **4 Master LT (Long Turn)** for all the sensations of long GS-type turns (acceleration, trajectory control, power, stability) and for high-speed morning outings on smooth, pristine pistes.
- **3 new Master ST (Short Turn)**, with short radii of 12 or 13 m for even greater carving thrills and unimaginable angles with maximum tip control and precision steering.

ON PISTE REACT

Rossignol has reinvented piste skiing with the REACT range. A comprehensive offering for all skiers, from experts to beginners. Our aim is to help everyone find the 'Flow': the perfect alchemy between body and mind, for turn after turn with complete confidence. To help you achieve this, we have developed a powerhouse of racing technology and adapted it to all skiers. For easier turn initiation, we have developed the Flex Tip Technology, which instantly transmits power and delivers maximum sensations. React "FIND YOUR FLOW"

INSTANT POWER

1

FLEX TIP TECHNOLOGY ENERGY STABILISER

Torsion work in the tip to channel energy for easier turn initiation.

2

LINE CONTROL TECHNOLOGY ENERGY ACTIVATOR

With a central rail integrated over the entire length of the ski, the LCT construction eliminates some of the ski's counter-flexion to ensure perfect stability and dynamic control over lines in turns. The LCT construction delivers power and energy in all circumstances and all conditions.

3

OVERSIZED SIDECUT ENERGY TRANSMITTER

By pairing the carving ski cut with the current widths under the foot, the OVERSIZED SIDECUT offers powerful precision and very good grip, including improved stability and control.

ALL MOUNTAIN EXPERIENCE

The Experience range has been designed to enhance your skills and erase your doubts to more effectively tackle any slope, with absolute composure. The construction combines strength and control to instil greater composure and confidence in your skis. Reflecting our concern for responsible production, we have strived to ensure that this range is as environmentally friendly as possible. We have made several commitments, including: PEFC™ certified wood cores, carbon-free energy sources in our production operations, recycled materials and more... EXPERIENCE, ALL-RESORT ski - a ski combining strength and control to allow you to enjoy even more exceptional moments in resorts!

ALL MOUNTAIN TECHNOLOGIES

1

DRIVE TIP SOLUTION

- Directional fibres combined with a flexible material (visco)
- Absorbs and eliminates vibrations
- Snow feel and control to boost confidence.

2

ALL TRAIL SIDECUT

The ALL TRAIL sidecut is designed to engage the tip from the very start of the turn and strengthen the action of the tail.

3

ALL TRAIL PROFILE

The ALL TRAIL profile is designed to ensure smooth and progressive absorption of uneven areas of terrain in all types of snow.

4

ALL TRAIL RATIO

The perfectly tailored profile and sidecut guarantee ideal behaviour of the tip in any conditions.

ECO-CONCEPTION

AN ECO-DESIGNED RANGE

The skis in the Experience range have been developed with close attention to the selection of raw materials and the use of recycled materials to minimise our environmental impact.

Our Poplar wood cores are PEFC™ certified, which guarantees sustainable forest management.

Our factory uses 100% of clean electrical energy.

TOPSHEET:
Made from a maximum of 15% recycled materials.
BASE:
Made from a maximum of 20% recycled materials.
EDGES:
Made from a maximum of 30% recycled steel.

Our factory has held ISO 14001 certification since 2006.

MADE IN EUROPE
650 kilometers is the maximum distance between our factory and the logistics centre.

FREERIDE SENDER

CALLING ALL IN

Playing with the laws of gravity, giving it everything you've got, on all terrain. This is the mantra of the new SENDER range. A fusion of technical precision, absolute versatility and power to push the boundaries of your adventures. ALL IN. Featuring double LCT and the iconic Air Tip technology, the skis in the SENDER range deliver control and lightness for your freeride sessions in all conditions. Another important aspect was the use of PEFC™-certified wood and recycled materials as part of our efforts to minimise the environmental impact of our freeride skis. **GRAVITY 1st.**

FREERIDE TECHNOLOGIES

1

DOUBLE LCT ABS

The DOUBLE LCT ABS construction is an adaptation of Line Control Technology on wider skis to improve line control with power and energy.

2

EXTENDED CORE

The EXTENDED CORE construction increases ski-snow contact and the torsional stability of the ski, boosting precision and control in varied snow conditions.

3

AIR TIP

The AIR TIP lightens the tip and tail of the ski for improved manoeuvrability and turn control in all snow conditions.

4

DAMP TECH

The DAMP TECH insert at the tip reduces ski vibrations to absorb irregularities in the terrain.

5

TITANAL BEAM

The TITANAL BEAM delivers the right amount of power under the foot and enhances grip across the entire length of the ski.

ECO-CONCEPTION

The skis in the SENDER range have been developed with close attention to the selection of raw materials and the use of recycled materials to minimise our environmental impact.

Our Poplar wood cores are PEFC™ certified, which guarantees sustainable forest management.

Our factory uses 100% of clean electrical energy.

ESCAPER

CALLING ALL OUT

From mini-adventures to wide open spaces, leave well-worn tracks behind and widen your horizons, take liberties with everyday routines, take time. Out here, the only thing we're connected to is nature. Both simple and essential. This freedom costs nothing... and yet it is worth its weight in gold.

SO WHAT KIND OF ESCAPER ARE YOU?

The free Escaper, touring in downhill mode, seeking out your own line.

The mountain Escaper, experiencing the very essence of touring, deep in the mountains, in discovery mode.

The resort Escaper, safely exploring vertical metres within the limits of the ski area in the company of friends or family.

ESCAPE 1ST

TOURING TECHNOLOGIES

1

V-SKIN ANCHOR

Attachment system allowing easy and intuitive mounting of skins on touring skis.

2

AIR TIP

The AIR TIP lightens the tip and tail of the ski for improved manoeuvrability and turn control in all snow conditions.

3

AERO PROFILE

The ski's dimensions are optimised to reduce inertia and increase grip.

4

PAULOWNIA WOOD CORE

The paulownia wood core reduces the ski's weight by up to 30% for improved agility and handling while retaining control.

5

PAULOWNIA & CELL CORE

The paulownia wood core reduces the ski's weight by up to 30% for improved agility and handling while retaining control.

6

NANO TITANAL

A 0.4 mm ultra-thin Titanal insert improves performance and precision while increasing the support of the bindings.

7

NANO BASALT

The new 0.3 mm Basalt fibre provides a high level of elasticity and performance while optimising the weight.

8

NANO CARBON

This ultra-thin 0.3 mm carbon layer improves stability and grip on snow while optimising the ski's light weight.

9

CARBON STRINGER

Positioned under the foot, the ultra-light CARBON STRINGER provides optimum resistance, stability and versatility.

FREERIDE PROGRESSIVE BLACKOPS

Our new BLACKOPS range has been redefined for those who are looking at the mountain like a Canvas. A space of self expression where nature and creativity are blended. Through the collaboration of rossignol blackops athletes and the artwork of super top secret, every Blackops ski showcases a rich, unique, & immersive environment w/o explanation. a snapshot of the wild, wonder, & beauty of our world - and for those who look closely - our relationship with it.

We've developed a new series of evocative, enigmatic and open to interpretation graphics with the illustrator David Habben and our friends at Super Top Secret. Illustration: David Habben | Graphics: Super Top Secret

ROSSIGNOL

JUNIOR

Our Junior ranges have been developed to support girls and boys seeking to carve their first tracks and progress while having fun. Young teenagers can find their perfect skis in the Teens series, with touring skis as well as freeride, freestyle or carving models. Younger skiers will love the specially designed models from the Hero or Experience ranges.

TECHNOLOGIES

PISTE

SIDECUT
OVERSIZED SIDECUT

Oversized and extending beyond the point of contact at tip and tail.

ROCKER PROFILE
PISTE ROCKER
90% camber - 5% tip rocker

LINE CONTROL TECHNOLOGY

The patented Rossignol technology, approved by our Racing department. The LCT construction exploits the ski's power and energy to deliver unconditional stability in all conditions. With a central rail integrated over the entire length of the ski, the LCT construction eliminates the ski's counterflexion to ensure enhanced stability and dynamic line control.

FLEX TIP TECHNOLOGY

Racing power and precision are now more accessible than ever before. Designed for faster acceleration into and out of turns, the new FLEX TIP TECHNOLOGY offers adaptive torsion control at the tip and tail to initiate carved turns instantly, and release with ease. The unique design efficiently channels energy for cleaner power transfer.

LCT SOFT

Derived from racing and patented by Rossignol, LCT technology now forms an integral part of the Performance ski range for women with a unique version: LCT Soft. Integrated into the core over the entire length of the ski, the central rail brings women skiers an ideal combination of power and tolerance for perfect control of her ski during turns.

ADAPTIVE FLEX
THE RIGHT FLEX FOR THE RIGHT SENSATION

While some people choose to ski hard, others prefer a more relaxed approach. Our new ADAPTIVE FLEX is a single response to meet the needs of every woman skier. With three unique flex profiles (power, responsiveness, comfort and tolerance) integrated in the brand-new NOVA range to provide every skier with the right flex for their practice and technique.

ALL MOUNTAIN

SIDECUT
ALL TRAIL SIDECUT

Instant turn initiation and powerful exit for smooth carving performance on any terrain.

ROCKER PROFILE
ALL TRAIL ROCKER
75% camber - 15% rocker tip - 10% rocker tail

DRIVE TIP SOLUTION

Combining directional fibres in the ski tip with a soft viscoelastic material in the front part of the ski, our new DRIVE TIP solution eliminates vibrations on bumpy terrain and in difficult snow conditions, for confidence-boosting control and gliding.

ECO-CONCEPTION

The skis in the EXPERIENCE range have been developed with close attention to the selection of raw materials and the use of recycled materials to minimise our environmental impact.

More information on www.grouperossignol.com/en/respect

FREERIDE

SIDECUT
PROGRESSIVE SIDECUT

Firm grip while opening up more scope and fluidity to cruise, dazzle and carve on all terrain and in any snow conditions.

ROCKER PROFILE
FREE ROCKER
60% camber - 25% rocker tip - 15% rocker tail

DOUBLE LCT ABS

The double LCT ABS construction is an adaptation of Line Control Technology on wider skis to improve line control with power and energy.

AIR TIP

The AIR TIP lightens the tip and tail of the ski for improved manoeuvrability and turn control in all snow conditions.

EXTENDED CORE

The Extended Core construction increases ski-snow contact and the torsional stability of the ski, boosting precision and control in varied snow conditions.

DAMP TECH

The DAMP TECH insert at the tip reduces ski vibrations to absorb irregularities in the terrain.

ECO-CONCEPTION

The skis in the SENDER and RALLYBIRD range have been developed with close attention to the selection of raw materials and the use of recycled materials to minimise our environmental impact.

More information on www.grouperossignol.com/en/respect

TOURING

SIDECUT
ALL TRAIL SIDECUT

Instant turn initiation and powerful exit for smooth carving performance on any terrain.

ROCKER PROFILE
FREE ROCKER
60% camber - 25% rocker tip - 15% rocker tail

V-SKIN ANCHOR

Attachment system allowing easy and intuitive mounting of skins on touring skis.

AIR TIP

The AIR TIP lightens the tip and tail of the ski for improved manoeuvrability and turn control in all snow conditions.

AERO PROFILE

The ski's dimensions are optimised to reduce inertia and increase grip.

TECHNOLOGIES

FREERIDE PROGRESSIVE

SIDECUT PROGRESSIVE SIDECUT

Firm grip while opening up more scope and fluidity to cruise, dazzle and carve on all terrain and in any snow conditions.

ROCKER PROFILE PISTE ROCKER

50% camber - 25% rocker tip - 25% rocker tail

ECO-CONCEPTION

The skis in the BLACKOPS range have been developed with close attention to the selection of raw materials and the use of recycled materials to minimise our environmental impact.

SKINS

COMPOSITION

100% NYLON: Lightweight, a thin design and long life span. Still with quality standards, the 100% Nylon skin opens the door to backcountry exploration.

MIX (70% MOHAIR / 30% NYLON): The classic skin mix, now lighter and with a thinner design. The skin for all enthusiastic skiers.

EVER DRY 3.0

EVER DRY 3.0 represents a step forward for the environment: it is the first fluorine-free treatment for skins.

GRIP

Good grip on ascents is very important. A combination of materials and fibre attachment systems make skins very stable in all conditions and throughout their entire life span.

SSL

Thinner layers make the SAFER SKI LIGHT (SSL) membrane 12% lighter, i.e. 150g/m². SSL reduces the weight of a pair of skins by around 60 to 75g while maintaining 100% watertightness.

CONSTRUCTIONS

SIDEWALLS

The SIDEWALLS construction offers a combination of materials and walls down the entire length of the ski to optimise the skier's grip, balance and power.

CENTRAL SIDEWALLS

The CENTRAL SIDEWALLS construction combines sandwich and cap constructions. Sandwich construction in the centre of the ski for effective grip, cap construction at tip and tail for easier turn initiation. This technology delivers a very fluid and comfortable ride. Grip, Ease, Durability.

CAP

Skis with this construction are easy to steer, with a fluid ride and excellent durability.

CORE

POPLAR WOODCORE

Very versatile construction, designed to ensure liveliness, grip and a feeling of safety.

PAULOWNIA WOODCORE

Paulownia wood is 30% lighter and offers a compromise between agility, control and power.

HD CORE

This brand-new low-density composite core offers a whole new level of snow feel and smoothness. The ABS sidewalls ensure direct transmission for a precise grip during turns. The low-density core ensures an easy and effortless ride in all snow conditions. Made in France.

PAULOWNIA & CELL WOODCORE

Designed for off-piste skiing, this construction is perfect for skiers seeking a compromise between lightness and stability.

ASH WOODCORE

The ASH CONSTRUCTION is dense, robust and heavy to optimise ski stability.

BEECH WOODCORE

The beech core ensures optimum dampening and excellent stability.

REINFORCEMENTS

CARBON

The Formula 1 of fibres, guaranteeing superior skiability. With unbeatable mechanical properties and a light weight. The carbon fibre offers power, grip and acceleration. It requires substantial adaptation work on the core and flexibility. With great control, it offers unique snow feel and breathtaking performance.

TI

This construction type has been proven in competitions. Fibreglass combined with a titanal layer gives the ski more power, grip and extremely high precision in turns.

FIBER

The fibreglass is more elastic than carbon. It's a perfect compromise for skiers seeking customised flex and resistant materials.

BASALT

The basalt fibre has various qualities but it is used in skiing for three main reasons:

- Vibration absorption
- Organic stability
- A stylish design;

The basalt fibre offers improved stability, smoother ski/snow contact and more 'silent' skiing.

DIAGO FIBER

DIAGO FIBER technology meets ultra-light paulownia cores. The complementary duo of technologies gives most skiers the opportunity to get up close and personal with the peaks and explore new landscapes with absolute composure.

CARBON ALLOY MATRIX

The unique carbon and basalt weave with fibreglass is the culmination of a clever and unrivalled blend of materials. This fusion produces a powerful and solid ski with a dynamic lightweight design, without forgetting maximum vibration absorption and a balanced flex from tip to tail.

BINDINGS

They are the skiers who take on the most challenging slopes of the World Cup, the freeriders who seek out the steepest slopes or the freestylers spinning in the air: all working closely with the LOOK teams to create the most sophisticated equipment: a binding that is so efficient you barely notice it, a binding they trust in 100%, a binding that makes them say “#ITRUSTLOOK”.

And like skiing, it's a serious business, but there's a fun side too. Our partners at Pit Viper have come up with an even more off-the-wall second season... find out more on social media.

These markings specify the standards and types of boots the bindings are compatible with.

Refer to the table:

MARKINGS	BOOTS			
	ISO 5355 A	ISO 23223 A GRIP WALK	ISO 5355 C	ISO 23223 C GRIP WALK
A	•			
A GRIP WALK	•	•		
CA	•		•	
CA GRIP WALK	•	•	•	•
C			•	
C GRIP WALK			•	•

A = ADULT BOOT and C = CHILD BOOT are written under the shell of the boot; ISO 5355 or ISO 23223 are written under the heel pieces of the boot.

SKIBOOT

Rossignol is a leading player in the ski boot market with 3 major assets: **fit, design and perceived value**, guaranteeing excellent sales across all of its ranges. Its motto when it comes to designing ski boots is **THE RIGHT WEIGHT**: lightness is an essential feature in modern ski boots; however, we have accepted no trade-off in performance, precision or comfort. Any boot needs to have the right weight, and this is governed, first and foremost, by its use. The technologies used in our ranges have been selected to strike the optimum balance between weight, performance and comfort.

The 22/23 collection unveils new arrivals and developments, with:

- New **HERO** boots, as efficient as ever on our athletes' feet, with Petra Vlhova at the top of the bill, winner of the World Cup Women's Overall Standings in the 20/21 World Cup. This range is revealing a completely revised look with a new very aggressive grey evoking the spirit of competition.
- And above all, a fully revamped version of our **PISTE** boot range - for men and women - for retail and rental. These boots aimed at specialist retailers have a completely new design with 3 internal lasts - 98, 100 and 102 mm. Generative design and Dual Core deliver performance, but **CONFIGURATION** has also arrived in the ski boot world: a combination of personalisation of all adjustable elements and a new type of liner customisation - using a new thermoforming machine.

NEW HI-SPEED

The creation of a ski boot is based on a convergence of 3 factors: An idea, strong convictions, serving consumer expectations. This work is shared by R&D, designers and marketing who face the following main challenges:

• For Marketing, **Pascal Roux, Marketing Director Rossignol ski boots:** "Our experience meant that we had strong convictions from the very start of the project. This was a source of great reassurance for the R&D and design teams during 3 years of intensive work."

• For Design, **Bertrand BARRE, CEO - co-founder of the Zebra group:** "The design team's mission is to understand marketing objectives and therefore the needs of skiers, exploiting R&D innovations to make the material work intelligently and save grams wherever possible."

• For R&D, **Massimo POLONI, Rossignol R&D hard manager:** "The challenge was to create the 2nd Dual Core generation, using a composite material. Carbon proved to be the best material to maximise the boot's performance."

The result is a brand-new HI-SPEED boot - with a design that is both functional and symbolic. The generative design substantiates the Dual Core and helps to achieve the right weight.

This boot has been designed specifically for specialist retailers - allowing them to showcase their expertise by creating the ideal boot for each skier.

What makes it different: **CONFIGURATION** - a combination of:

- **PERSONALISATION:** the ability to make lots of adjustments using integrated systems,
- **CUSTOMISATION:** the most advanced thermoforming possible for the liner using a new, specially designed thermoforming machine.

**HI-SPEED,
DESIGNED
TO BE yours**

TECHNOLOGIES HI-SPEED

To design a high-performance ski boot, we made lots of choices - in terms of design, technologies, structure and FIT.

GENERATIVE DESIGN STRUCTURE

Generative design is unique to Rossignol. It's part of the brand's DNA. This structure allows us to optimise material thicknesses: more rigid on the lower part of the shell and on the back of the cuff. Different thicknesses are used to optimise the weight. It can be combined perfectly with the Dual Core technology.

DUAL CORE

DUAL CORE is a unique and patented technology and represents the key to success in our different projects. **ALLTRACK & HERO**. It is validated by our World Cup Athletes.

In black: PU + Carbon
In grey: PU

CARBON DUAL CORE

The first injection is made using Polyurethane reinforced with carbon fibres. On the one hand, this very rigid material helps to strengthen the lower part of the shell and optimise resistance to flexion and torsion, and on the other hand, it strengthens rear support, thus increasing the boot's precision.

ASYMMETRIC DUAL CORE CUFF

The **DUAL CORE** technology helps to strengthen the inner side of the cuff to provide better grip in turns and greater support.

POSITION OF THE AXIS OF ROTATION

To adapt to the current ski, the position of the axis, which has a major influence on the structure of the boot, has been modified.

AXIS OF ROTATION VS ALLSPEED

The axis of rotation is positioned 1.2 cm higher.
> More edge-to-edge effectiveness
> Greater precision
> More stability in turns

AXIS OF ROTATION VS HERO

Same angle, same height as the HERO boots, but the axis of rotation is further forward: 1 cm
> Less radical and aggressive
> Easier turn initiation
> More progressive flex

THE RIGHT WEIGHT

The **RIGHT WEIGHT** is our mantra. Ultra-light products have revealed their limits in terms of performance and ease of use.

For a high-performance boot, we opt for:
NEW HI-SPEED ELITE: 2,070 g
NEW HI-SPEED PRO: 2,010 g

NEW BUCKLES

The use of a new buckle system allows us to create a very thin, integrated design.

TECHNOLOGIES HI-SPEED

CONFIGURATION

Configuration is a key asset for these new boots - all the settings combined with CUSTOMISATION of the liner allow you to offer customers a real benefit in terms of both comfort and performance.

1. PERSONALISATION

FLEX ADJUSTMENT

The boot's flex can be adjusted up or down by changing the position of the screws on the back of the cuff. Central position - the flex shown on the boot. Moving the screws as pictured in the diagram allows you to adjust the flex by 5 points (+/-).

CANTING

Adjustment of the lateral angle of the cuff by +/- 1° to adapt to the shape of the lower leg.

CATCHES

The catches on the cuff can be adjusted to 3 positions to increase or reduce space for the calves.

FORWARD LEAN ADJUSTMENT

This setting allows you to adjust the forward lean of the boot to make it more aggressive. In standard position - when the boot comes out of the box - the spoiler is in the low position and the angle is 10.6°. Adjusting the spoiler to the upper position creates a 6 mm forward lean and a 6 mm height gain, for a forward lean angle of 12.6°.

2. CUSTOMISATION

This involves shaping the liner to the skier's foot.

We have developed a new thermoforming machine - the TRUE FORM MOLDING UNIT - which allows highly precise thermoforming.

This machine has an arm that blows air at a temperature of 80° to thermoform the padding and tongue. But the biggest innovation is the use of heated covers - inspired by the motor racing world - to thermoform the external material of the liner for a perfect result.

PROCESS

1. FULL CUSTOMISATION - HOT AIR + HEATED COVERS

Ultimate customisation.

- Place the liners under the arm.
- Close the sleeve.
- Wrap the liner in the heated cover.
- Press "Alpine".
- Heat the 2 elements for 8 minutes (automatic timer).
- Leave the liners for 2 minutes and then put them back in the shells.
- Put the boot back on the customer's foot. Tighten it slightly and leave it on for 10 minutes with the buckles closed.

2. CUSTOMISATION

Liners in the shell or outside the shell if you prefer.

- Place the boots under the arms.
- Pull up the sleeve and fasten it below the buckle on the cuff.
- Press "Alpine".
- Heat for 8 minutes (automatic timer).
- Leave for 2 minutes before putting it on the customer's foot.
- Tighten it slightly and leave it on for 10 minutes with the buckles closed.

3. QUICK FIT

Comfort heating - QUICK HEATING INSIDE THE LINER.

- Liners in the shell
- Place the boots under the arms.
- Press "Pre Heat".
- Heat for 2 minutes (automatic timer).
- Ready for a quality test.

LINER

LINER 5 ZONES PRE-SHAPED FULL CUSTOM

The liner is entirely thermoformable (external stem/padding and tongue) What makes it different is a special construction that allows a high level of thermoforming in the ankle bone, metatarsal (1st and 5th) and navicular zones to mould perfectly to the shape of the foot - while the rest of the stem retains its properties for perfect support. This ensures excellent support and therefore very high technical properties.

PRE-SHAPED LINER

The liners are pre-shaped around the ankle bones for greater comfort and support.

SEAMLESS TOE BOX

To increase the efficiency of the thermal insulation - we have designed a liner with a toe box that retains heat inside the liner. Thermographic studies show that this new design has reduced energy wastage by around 20%.

ON PISTE HI-SPEED

The new HI-SPEED piste range comes in 3 internal last of 98, 100 and 102 mm. Configuration is the key concept to ensure these boots are ideally tailored to each skier - whether to improve performance and/or comfort.

TRUE FORM MOLDING MACHINE

The customisation machine has been developed by the Rossignol R&D teams to optimise the customisation of the new HI-SPEED and PURE boots. It consists of 2 tubes that propel hot air into the liner.

Optionally, heated covers can be used for complete customisation by heating the stem of the liner.

SKI BOOTS TECHNOLOGIES

STRUCTURE

STRUCTURE GENERATIVE DESIGN GRID

The **Generative Design Grid** structure of the Alltrack boots allows material thicknesses to be reduced to save weight, while ensuring a sufficiently rigid structure for excellent skiability.

SENSOR MATRIX

The design of all 104 mm boots is structured to wrap the foot more effectively and give the boot an original personality.

JUNIOR CELLULAR DESIGN

The boot design is intended to be close to the foot, with thin layers to save weight. The HERO J4 model weighs 1,090 g (1/2 pair). It also allows excellent progressive flexion, which is essential for good skiability.

TECHNOLOGIE DUAL CORE

DUAL CORE involves injecting materials with different hardness levels or of different types into the same mould. The result is a sandwich construction with an ultra-thin layer of hard materials on the outside encapsulating the softer materials inside. This makes it possible to create zones of different hardness on the boot, without adding layers of plastic.

This technology can be used to accurately fine-tune the progressive flex, rear support and rebound.

DUAL CORE RACE

The entire HERO WORLD CUP and HERO range features the DUAL CORE technology. The process involves three injection points on the shell and two on the cuff. This technology can be used to accurately fine-tune the progressive flex, rear support and rebound. It also allows for highly effective lateral power transfer.

DUAL CORE ALLTRACK

The DUAL CORE technology works in synergy with the Generative Design Grid. It makes it possible to reduce weight while retaining rigidity. This is essential to ensure a high level of skiability. On the ALLTRACK boots, the Dual Core technology is used on the lower part of the shell - which increases torsional rigidity and makes the boot easier to put on.

LINER

PRE-SHAPED LINER

The lower part of these liners is pre-shaped around the ankle bone to ensure a snug fit with the shell's internal last. The shape can be seen on the outside of the liner.

FULL CUSTOM LINER

For improved precision and performance, these liners are fully customisable to mould perfectly to the shape of the foot. The internal padding, external stem and tongue are all customisable. Customisation is carried out using the new thermoforming machine - True Form Moulding Unit - using heated covers for greater effectiveness on the stem - with the Alpine programme. - 8mn. See page 67.

FULL CUSTOM LINER

CUSTOM LINER

Only the internal padding of these liners can be customised.

CUSTOM LINER

DIFFERENT TYPES OF LINER

FULL CUSTOM T1
Dual-material padding: EPDM FLEXALON.
FULL CUSTOM T2
Mono-material padding: FLEXALON.
FULL CUSTOM T3
Mono-material padding: POLYETHYLENE.
CUSTOM T3/T4
Mono-material padding.

JUNIOR LINER COMFORT FIT

The liner features a welded sole for added thermal insulation.

THERMAL INSULATION

Rossignol liners have excellent thermal insulation thanks to the use of different thermal insulating materials.

3M Thinsulate INSULATION **THINSULATE® STRETCH:** This very thin fibre is used mainly in clothing thanks to its elasticity which supports freedom of movement. In a liner, it works ideally with the other materials to provide perfect foot support for great skiability.

WinTherm **WINTHERM®** is a highly effective thermal insulator. Positioned at the forefoot, it comprises a sheet of micro-perforated aluminium that allows air to circulate and a polar fleece material to guarantee warmth and comfort.

HIKE MODE (ALLTRACK)

On the ALLTRACK boots:

1/ An optimised axis of rotation - 6 mm lower.

2/ A new construction at the bottom of the shell cut away at the rear.

> wider opening of the cuff towards the rear angle range of motion = 50° for very high freedom of movement on ascents

3/ A metal/metal unlocking mechanism for the cuff to create a more rigid boot structure. This design results in a higher flex index and a level of performance close to that of a boot with a fixed cuff.

FOREFOOT INSERT (ALLTRACK)

To allow smoother foot entry, an insert made from flexible materials is positioned at the top of the shell for easier opening of the sides.

This ensures that the boot is still easy to put on, despite the high flex index and very rigid plastic materials.

MATERIALS

GRILAMID: This Thermo-Plastic material is one of the lightest on the market and offers very good resistance. It can be used with high-density modules to reduce thicknesses. The ALLTRACK ELITE 130 LT, ALLTRACK ELITE 110 LT WOMEN, ALLTRACK PRO 120 LT models all have Grilamid shells.

POLYURETHANE: All boot shells in the ALLTRACK range are made from Polyurethane for better skiability and easier entry/exit.

GRIPWALK **GRIP WALK**

All Rossignol boots are:

- pre-mounted with Gripwalk heelpieces - which are easily recognisable: thanks to their markings and a colour code on all models (the rigid areas are orange)
- Gripwalk compatible: We have 4 Gripwalk heelpiece models for all boots in the range.

ABOVE ALL, HERE

we Rise

WE RISE IS A CALL TO ACTION WE RISE IS A COMMUNITY

Because we are women who dare,
Women who embrace challenge and women
who doubt.
We are skiers and snowboarders,
Champions, novices and experts,
We are intrepid adventurers and cautious
explorers.
We are old friends, young mothers, single women
and granddaughters.

We celebrate daring
and mutual assistance
We advocate sharing
and pleasure
We seek the perfect
balance
And pass on our
knowledge to younger
generations.
We set our sights high
We seek out challenges
We rise up together
We aspire to "Another
Best Day".

WOMEN SKIS

Take up the challenge, build confidence, experience new sensations, and feel the revitalising emotions that only skiing can bring. Rossignol's mission is to help all women express their full potential on skis with no compromises. This 2022-2023 collection reveals a complete range of all mountain freeride skis with the amazing **RALLYBIRD** series, while the new **ESCAPER W** skis will thrill passionate women tourers and freetourers. Another new arrival, the **NOVA** range is now even more durable and elegant.

ON PISTE
NOVA

Combining performance and elegance to deliver the best carving, that's Rossignol's promise with this brand-new collection of piste skis: NOVA. With its unique construction, designed specifically for women, the top-end NOVA ski range paves the way for smooth turns with the perfect dose of power for amazing carving sensations. The progressive power concept makes NOVA the first range of skis that is suitable for all techniques, easy to adapt to and control, whatever the skier's expectations.

ON PISTE
TECHNOLOGIES

ADAPTIVE POWER

1
LCT SOFT

Derived from racing and patented by Rossignol, LCT technology now forms an integral part of the Performance ski range for women with a unique version: LCT SOFT. Integrated into the core over the entire length of the ski, the central rail brings women skiers an ideal combination of power and tolerance for perfect control of her ski during turns.

2
ADAPTIVE FLEX (WOMEN)
THE RIGHT FLEX FOR THE RIGHT SENSATION

Each skier has her own style of skiing, each skier has her own flex.

3
OVERSIZED SIDECUT
ENERGY TRANSMITTER

By pairing the carving ski cut with the current widths under the foot, the OVERSIZED SIDECUT offers powerful precision and very good grip, including improved stability and control.

ALL MOUNTAIN EXPERIENCE

The new Experience W range has been designed to enhance your skills and erase your doubts to more effectively tackle any slope, with absolute composure. The construction combines strength and control to instil greater composure and confidence in your skis. Reflecting our concern for responsible production, we have strived to ensure that this range is as environmentally friendly as possible. We have made several commitments, including: PEFC™ certified wood cores, carbon-free energy sources in our production operations, recycled materials and more... Experience, All-Resort ski - a ski combining strength and control to allow you to enjoy even more exceptional moments in resorts!

1

DRIVE TIP SOLUTION

- Directional fibres combined with a flexible material (visco)
- Absorbs and eliminates vibrations
- Snow feel and control to boost confidence.

2

ALL TRAIL SIDECUT

The ALL TRAIL sidecut is designed to engage the tip from the very start of the turn and strengthen the action of the tail.

3

ALL TRAIL PROFILE

The All Trail profile is designed to ensure smooth and progressive absorption of uneven areas of terrain in all types of snow.

4

ALL TRAIL RATIO

The perfectly tailored profile and sidecut guarantee ideal behaviour of the tip in any conditions.

5

ADAPTIVE FLEX (WOMEN)

THE RIGHT FLEX FOR THE RIGHT SENSATION
Each skier has her own style of skiing, each skier has her own flex.

ECO-CONCEPTION

AN ECO-DESIGNED RANGE

The skis in the EXPERIENCE range have been developed with close attention to the selection of raw materials and the use of recycled materials to minimise our environmental impact.

Our Poplar wood cores are PEFC™ certified, which guarantees sustainable forest management.

Our factory uses 100% of clean electrical energy.

TOPSHEET:
Made from a maximum of 15% recycled materials.
BASE:
Made from a maximum of 20% recycled materials.
EDGES:
Made from a maximum of 30% recycled steel.

Our factory has held ISO 14001 certification since 2006.

MADE IN EUROPE:
650 kilometers is the maximum distance between our factory and the logistics centre.

FREERIDE RALLY- BIRD

Set off on your next freeride sessions with peace of mind. The new RALLYBIRD range is aimed at daring and adventurous freeriders, women with a thirst for thrills or who simply want to enjoy a day skiing in a resort. RALLYBIRD skis combine versatility, precision and handling for elegant control in all snow conditions. Designed using PEFC-certified wood and recycled materials, they help to reduce our environmental impact. **RIDE FREE.**

FREERIDE
TECHNOLOGIES

FREERIDE TECHNOLOGIES

1

DOUBLE LCT ABS

The DOUBLE LCT ABS construction is an adaptation of Line Control Technology on wider skis to improve line control with power and energy.

2

EXTENDED CORE

The EXTENDED CORE construction increases ski-snow contact and the torsional stability of the ski, boosting precision and control in varied snow conditions.

3

AIR TIP

The AIR TIP lightens the tip and tail of the ski for improved manoeuvrability and turn control in all snow conditions.

4

DAMP TECH

The DAMP TECH insert at the tip reduces ski vibrations to absorb irregularities in the terrain.

5

TITANAL BEAM

The TITANAL BEAM delivers the right amount of power under the foot and enhances grip across the entire length of the ski.

ECO-CONCEPTION

The skis in the Rallybird range have been developed with close attention to the selection of raw materials and the use of recycled materials to minimise our environmental impact.

Our Poplar wood cores are PEFC™ certified, which guarantees sustainable forest management.

Our factory uses 100% of clean electrical energy.

ESCAPER

CALLING ALL OUT

From mini-adventures to wide open spaces, leave well-worn tracks behind and widen your horizons, take liberties with everyday routines, take time. Out here, the only thing we're connected to is nature. Both simple and essential. This freedom costs nothing... and yet it is worth its weight in gold.

SO WHAT KIND OF ESCAPER ARE YOU?

The free Escaper, touring in downhill mode, seeking out your own line.

The mountain Escaper, experiencing the very essence of touring, deep in the mountains, in discovery mode.

The resort Escaper, safely exploring vertical metres within the limits of the ski area in the company of friends or family.

TOURING TECHNOLOGIES

1

V-SKIN ANCHOR

Attachment system allowing easy and intuitive mounting of skins on touring skis.

2

AIR TIP

The AIR TIP lightens the tip and tail of the ski for improved manoeuvrability and turn control in all snow conditions.

3

AERO PROFILE

The ski's dimensions are optimised to reduce inertia and increase grip.

4

PAULOWNIA WOOD CORE

The paulownia wood core reduces the ski's weight by up to 30% for improved agility and handling while retaining control.

5

PAULOWNIA & CELL CORE

Designed for free-touring, the vertical strips of the PAULOWNIA and MICROCELL wood core create a perfect fusion of extremely light weight, shock absorption and stability.

6

NANO TITANAL

A 0.4 mm ultra-thin Titanal insert improves performance and precision while increasing the support of the bindings.

7

NANO BASALT

The new 0.3 mm Basalt fibre provides a high level of elasticity and performance while optimising the weight.

8

NANO CARBON

This ultra-thin 0.3 mm carbon layer improves stability and grip on snow while optimising the ski's light weight.

9

CARBON STRINGER

Positioned under the foot, the ultra-light CARBON STRINGER provides optimum resistance, stability and versatility.

FREERIDE PROGRESSIVE BLACKOPS

Our new Blackops range has been redefined for those who are looking at the mountain like a Canvas. A space of self-expression where nature and creativity are blended. Through the collaboration of Rossignol Blackops athletes and the artwork of Super Top Secret, every Blackops ski showcases a rich, unique, & immersive environment w/o explanation. a snapshot of the wild, wonder, & beauty of our world - and for those who look closely - our relationship with it.

We've developed a new series of evocative, enigmatic and open to interpretation graphics with the illustrator David Habben and our friends at Super Top Secret.

ROSSIGNOL

ROSSIGNOL

WOMEN SKIBOOT

Our philosophy: A range dedicated to women.

- A unique range structure designed and developed for women.
- No technical jargon, simple and easily understandable words.
- We focus our arguments on what appeals to women, for example thermal insulation.

- We pay careful attention to decors, to the selection of materials and colours, to create products that appeal specifically to women in stores. The aim is to create a special bond inspiring trust and desire!

NEW PURE

The essential women's range is revealing a completely new design this season - in terms of both technical features and aesthetics. The boots are available in 3 lasts (Skinny, Slim and Regular) with flex from 120 to 70 to meet the needs of all skiers, from the most demanding to the less technical.

The HEAT models have their own identity that incorporates a special lining and colourful flashes of gold. Merino wool remains the recognised thermal insulator for this range.

A team of women were behind the design of the PURE range - a unique approach that has resulted in products tailored specifically to the needs of women skiers.

• For marketing, **Fabienne Abondance, Category Manager Rossignol ski boots:** "At Rossignol, women are involved in every stage in the creation of our ski boots, from R&D to design, marketing, styling and testing."

• For Design, **Ornella Franco, Rossignol ski boot designer & graphic designer:** The women's cuff is designed specifically for the female foot. We have combined the strength of the Generative design with a cuff featuring softer aesthetics."

• For graphic design, **Armelle Gauthier, Sale Gosse Design:** "Getting the identity of the range right depends on an in-depth understanding of trends. This is the base on top of which we can imagine, dare and create!"

• For Testing, **Annachiara Gerolimetto, Rossignol skiboot test team:** "The boot tests are carried out by a team of women. We start with dry tests to make the first modifications and then move on to tests on snow."

The result is a brand-new range of PURE boots to meet every wish.

**PURE,
DESIGNED
TO BE yours**

WOMEN SKIBOOT TECHNOLOGIES

STRUCTURE

HOW DO YOU CHOOSE YOUR FIT?

To make it easier to understand the different fits available, we have drawn our inspiration from the clothing industry and arranged our fits into four categories. The different fits have been designed to address various foot shapes and also deliver the level of support required, bearing in mind its direct influence on performance.

skinny fit

98 mm

An extremely narrow fit for women skiers in search of excellent support to ensure a high level of skiability. It is also the ideal fit for women with slender feet looking for excellent foot support.
Last 98 mm

slim fit

100 mm

A narrow fit for all proficient women skiers prioritising perfect foot support without any trade-off in comfort.
Last 100 mm

regular fit

102 mm

A classic fit that will satisfy a large number of women skiers wishing to strike the perfect balance between support and comfort.
Last 102 mm

relax fit

104 mm

A generous fit for all women skiers looking mainly for comfort, as well as for all those with fairly wide feet.
Last 104 mm

LINER

LINERS TECHNOLOGY

All women's boots have liners that are specifically designed to suit the female body shape. Women's liners are cut lower to accommodate differences in calf shape. They also have a more open shape for a more comfortable fit. The padding in the upper liner is very flexible to prevent any discomfort around the calf. The lining materials are very soft and comfortable, and are designed with a simple objective in mind: to make you want to put your foot in the boot.

THERMAL INSULATION

DEDICATED THERMAL INSULATION: since insulation is especially important in women's boots, all liners have passive thermal insulation based on the following materials: **MERINO wool**, **WINTHERM®** and **THINSULATE STRETCH®**. Our laboratory-based thermal imaging studies show that these materials give our liners excellent thermal insulation.

THE LINERS HAVE EITHER:

1 **TOTAL THERMAL INSULATION:** the insulator is all around the foot.

2 **FOREFOOT THERMAL INSULATION:** the insulator is around the forefoot in the toe area.

MERINO WOOL

MERINO WOOL

More than a thermal insulator, Merino wool is a natural thermal regulator. Its main qualities are: thermal control, soft feel, breathability, odour control and fast drying.

WinTherm

WINTHERM

Wintherm proved to be an especially effective thermal insulator in our laboratory tests. Positioned at the forefoot, it comprises a sheet of micro-perforated aluminium that allows air to circulate and a polar fleece material to guarantee warmth and comfort.

3M Thinsulate INSULATION

THINSULATE® STRETCH

Used mainly in clothing, this extremely fine fibre improves freedom of movement thanks to its elasticity. In a liner, it works ideally with the other materials to provide perfect foot support for great skiability.

PURE TECHNOLOGIES

STRUCTURE

SHELLS

Women's boots use the same shells as unisex boots which means that all features relating to the last, fit and performance are identical.

GENERATIVE DESIGN STRUCTURE + DUAL CORE

This specific design allows different thicknesses to be distributed according to the zones of the boot to obtain the right WEIGHT. On the PURE boots, the Generative Design is applied more softly on the cuff with thinner layers to respect the lower leg wrap. The associated DUAL CORE technology boosts the boots' performance.

CUFFS

The height of the cuff is significantly lower in comparison with a unisex cuff. The tulip-shaped rear section easily accommodates a woman's natural calf shape. It is less structured to take better account of female skiers' power.

PERSONNALISATION

Personalisation involves adjusting all possible 'mechanical' settings to tailor the boot to the skier's foot.

Adjustment of flex - canting, catches.

LINER

CUSTOMISATION

This involves shaping the liner to the skier's foot - using the Thermo True Form Moulding machine - for details of the process see page 67.

2 types of customisation:
FULL CUSTOM: stem, padding, tongue
CUSTOM: padding

CHAUSSON 5-ZONE FULL CUSTOM

The PURE ELITE 120 model has a 5 ZONE FULL CUSTOM liner - with highly thermoformable ankle bone, metatarsal (1st and 5th) and navicular zones to mould perfectly to the shape of the foot - while the rest of the stem retains its properties for perfect support. This provides the assurance of excellent support and consequently very high technical performance.

SEAMLESS TOE BOX

To increase the thermal insulation, we have designed a liner with a toe box that retains heat inside the liner.

Thermographic studies show that this new design has reduced energy wastage by around 20%.

DOUBLE STRAP

This innovative and patented strap is very intuitive to handle. It makes the buckle easier to use by allowing you to close it with both hands - in a straight line. It is therefore extremely efficient and precise - with a very wide tightening range.

HEAT MODELS

The **PURE PRO HEAT** model features a heating system that can be adjusted via Bluetooth using a Therm-ic® app - available to download free of charge using the attached link.

www.therm-ic.com/fr/content/13-application-therm-ic-heat-control

This app allows you to very easily adjust the temperature setting. Two modes can be used to manage the batteries.

- **ECO MODE** allows you to choose a heating period - for example: 4 minutes heating followed by 2 minutes off.
- **MOVEMENT MODE**: heating starts each time the skier stops.

SWITCHING ON:
Press and hold (for around 3 seconds) the function button to set the integrated system to the lowest heating level. Holding the button for more than 6 seconds will cause the liners to go into safety mode and switch off.

PAUSE MODE:
If you do not press the button within 10 seconds, the system will switch to pause mode. Press the function button (for around a second) to activate the system, which will then switch back to the last selected heat setting.

SETTINGS:
Press the function button once (for around a second) to increase the heat setting (level 1, level 2 or level 3).

SWITCHING OFF:
To switch off the system integrated in Therm-ic® ski liners, press and hold the button (for three seconds, until the heat setting LED is no longer illuminated).

> **LEVEL 1:** one flash, low heat setting.

> **LEVEL 2:** two flashes, medium heat setting.

> **LEVEL 3:** constant illumination, high heat setting. If the system is in pause mode, you will first need to activate it.

USAGE TIPS

Using the batteries - The batteries must be charged before using for the first time.

green. Charging stops automatically. The charging time is between four and six hours.

1. Connect the USB cable. The charging indicator lights up and turns green. Then plug in the two connectors linked to each boot. The indicator turns red and charging begins.
2. When the batteries are fully charged, the charging indicator turns

3. Unplug the two boot connectors from the USB cable.
4. Connector trap on the Boot Integrated System. During and after charging, the Boot Integrated System remains in the mode in which it was set before charging.

INSTRUCTIONS FOR USE

The heating system integrated in Therm-ic® ski liners has four modes: stop and levels 1, 2 and 3. These modes are indicated by the LED for the heating speed. The number of flashes of the LED indicates the selected heat setting. The integrated heating system can be adjusted to three different

settings (level 1, level 2 and level 3) using the control panel.

If the LED indicating the heating level is not illuminated, this means the heating system integrated in the Therm-ic® ski liners is switched off.

INSTRUCTIONS FOR THE BLUETOOTH PAIRING SYSTEM

1. Enable Bluetooth on your phone and then open the Therm-ic® Heat Control app.
2. Connect the batteries: when the start screen appears, switch on your two batteries by pressing and holding each button. Continuous illumination of the red LED indicates that your batteries are switched on. Rapid flashing of the LED shows that Bluetooth is now enabled.
3. Add the batteries: click the "+" button in the middle to show your batteries in Bluetooth. Then click "add" to connect the two batteries to your phone.

4. Heat settings: the first screen allows you to adjust the heat setting for both batteries at the same time. You can increase or reduce the level of heat from 1 to 10. You can also switch off the heat temporarily by pressing pause.
5. Heat settings - individual: the second screen allows you to adjust the heat setting for each battery individually. By default, they are at the same level, but this option can be customised.

TECHNICAL EQUIPMENT

What is ROSSIGNOL's mission? To help skiers practise winter sports with a combination of safety, pleasure and comfort. To achieve this, our R&D teams and technical partners work together to develop the highest performance and safest technical equipment possible. Each of our ranges is continuously enhanced with innovative new technologies tailored specifically to skiers' needs: IMPACTS, MAGNE'CLICK, ZEISS, SAFETY GRIP and more.

HELMETS & GOGGLES

To support the performance of our Heroes, we have completely revised our HERO range of helmets and goggles.

We have reworked the fit, materials and size of the helmets to provide greater precision, technical performance and comfort. Our Giant Slalom helmets are also revealing a new buckle design.

This new range of helmets features a brand-new chin strap. With its easy positioning, even when wearing gloves, and adjustable height, this chin strap will delight all slalom skiers. A single product compatible with all our helmets.

Our range of goggles also creates an attractive look in combination with the helmets. New colours still with the same high optical quality. The MAVERICK HERO is a new arrival in the range: its toric lens creates an extremely wide field of vision while the Sonar by ZEISS lenses provide amazing optical quality.

AFTER

IMPACTS PROTECTS YOU LONGER

93%* of skiers know that replacing your helmet after a heavy fall is highly recommended. But how many of them do this? Based on this finding, Rossignol has developed a new technology designed to offer more reliable and lasting protection for skiers, taking into consideration the actual usage conditions for a ski helmet. During its storage, transportation and use, a ski helmet is subjected to numerous constraints. Even low-intensity impacts, often leaving no visible trace of damage, can impair a helmet's protection and make it less resistant. Therefore, to ensure skiers stay protected over time, Rossignol uses a technology called **IMPACTS** in its range of ski helmets. This technology offers improved protection against multiple impacts, without any compromise in either comfort or aesthetics.

*results after a study carried out on a panel of 1,000 skiers

HELMETS TECHNOLOGIES

1

CONSTRUCTION

ABS helmets are made up of two elements: a 3 mm-thick ABS shell and an internal absorbing foam which are injected separately and then assembled.

The light **INMOLD** construction includes a 1 mm preformed polycarbonate sheet with internal absorbing foam injected directly into the shell for an even lighter weight.

The development of the **GLUED ON** structure for our junior helmets provides a good compromise between resistance and durability.

2

VENTILATION

ADJUSTABLE VENTS enable air-flow to be increased or decreased for more control over heat escape. This provides personalised comfort throughout the day, no matter what the conditions.

PERMANENT VENTILATION uses ventilation channels to regulate the temperature and increase comfort by enabling hot air and moisture to escape.

4

SIZE ADJUSTMENT

The **R-FIT SYSTEM** is an adjustment system that lets you adjust your helmet for greater support, safety and comfort. This ideally user-friendly system consists of two arms clipped into the helmet and an adjustable dial.

3

FIDLOCK BUCKLE

Some of our helmets feature an extremely fast Fidlock magnetic closing system for easier operation with ski gloves.

MICROMETRIC BUCKLE

To allow easier use when wearing gloves as well as very precise adjustment, the giant slalom helmets have a micrometric buckle.

5

EARPADS 2.0

The **EARPADS 2.0** technology brings you greater safety on the slopes, allowing you to remain aware of the sounds around you while effectively protecting your ears.

6

MAGNETIC GOGGLE CLIP

The goggle clip developed for the back of the ALTA IMPACTS helmet is magnetic. It allows goggles to be positioned quickly and accurately on the helmet, even when wearing gloves.

GOGGLES TECHNOLOGIES

1 LENS SHAPE

TORIC LENSES provide both horizontal and vertical curvature, extending the lateral field of vision while optimising the overall size of the goggles. Rossignol and Zeiss have pooled their expertise to develop a toric lens offering a very wide field of vision, optical performance and maximum comfort while retaining compact goggle dimensions to ensure a perfect fit with a helmet.

SPHERICAL LENSES provide both horizontal and vertical curvature, following the shape of the retina. This technological effect reduces optical distortion to a minimum.

CYLINDRICAL LENSES provide solely horizontal goggle curvature. This gives them a larger field of vision and therefore improved comfort when descending.

6 ZEISS LENS

ROSSIGNOL works with the optical expert **ZEISS** to develop high-performance, technical goggles that help you to ski in all conditions.

ZEISS' **Sonar** technology emphasises contrasts by significantly improving details and the perception of snow depth. This provides clearer visibility of shadows, textures, bumps, changing terrain and potential hazards. This cutting-edge technology allows you to ski in constantly changing conditions and anticipate risks more effectively to improve your safety and performance.

2 FOAM

The density and quality of the foam are important factors to consider. Featuring single, double or triple-density foam, Rossignol goggles stay securely in place and feel comfortable to wear thanks to the very soft fleece covering.

3 STRAP

To help goggles stay in place over a helmet - some goggle straps are coated in silicone.

4 FOG CONTROL

An anti-fog coating is applied to the lens with the aim of guaranteeing the best possible visibility in all conditions.

5 MAGNE'CLICK

Rossignol's **MAGNE'CLICK** technology allows very fast lens changes to maintain optimal vision in changing weather conditions. Little magnets and clips keep the lens secured to the frame throughout an entire day on the slopes.

The **MAGNE'LENS** goggle is packed with technologies for people seeking only the very best. Thanks to our **MAGNE'CLICK** technology, you can change the lens in just a few seconds according to the light conditions. The two double toric lenses and triple-density foam will optimise

both viewing comfort and the fit with your helmet. People who wear glasses will also appreciate the OTG technology with pre-cut foam on either side of the face to accommodate the arms of glasses!

POLES

TECHNOLOGIES

1

SAFETY GRIP

The series of poles with **SAFETY GRIP** technology provides a new solution to allow skiers to quickly and easily release their poles in the event of a fall, an avalanche or if a pole becomes wedged between rocks. The system is designed for use in emergencies or risk situations, to bring skiers comfort and safety in all conditions. A sharp down and up movement is all that is required to release the wrist strap from the handle and protect the skier.

2

ARTICULATED BASKET

Our rotating basket is aimed at all ski touring and freeride touring enthusiasts who dream of new summits and pristine powder fields. Its ball-joint construction, 32° rotation and excellent flexibility make it truly adaptable for hugging uneven terrain. Guaranteed comfort, safety and stability for freeriders on both climbs and downhill sections.

3

TELESCOPIC SYSTEM

An intuitive and efficient system allows you to adjust the size of the pole to your chosen discipline and different snow conditions. Ideal for climbs and downhill sections in freeriding as well as for younger skiers who grow from one season to the next.

4

FOLDABLE SYSTEM

Designed for extreme conditions, our **FOLDABLE SYSTEM** allows you to fold your poles in 3 to fit easily into your backpack. After unfolding, you can count on a pole that is as solid and reliable as a classic alpine pole.

BAGS COMMUTERS

Rossignol has also launched a brand-new series of backpacks with its COMMUTERS range.

Brimming with features, these backpacks are very practical for daily use in both cities and mountains. Their new design language is Rossignol's signature.

Heat-sealed seams and a watertight material and zips make sure everything stays dry inside.

Another key feature, all the polyester used in this backpack is recycled. Which means it is actually made from used plastic bottles.

Finally, reflective strips and logos make sure you are seen in the dark for safety at all times.

ANOTHER BEST DAY

Respect

OUR SOCIAL AND ENVIRONMENTAL RESPONSIBILITY PROGRAMME

For over 114 years, Rossignol has been driven by action: skiing, thrilling, sharing, winning, innovating. We have decided to harness this energy, this fighting spirit and this thirst for movement in our Respect programme to further a greater cause: Respect for the people who are our driving force every day and Respect for our mountains, this playground that brings us together and that we cherish, to keep our promise of always experiencing Another Best Day.

REDUCE OUR INDUSTRIAL WASTE BY 40% BY 2025

REDUCE OUR CARBON FOOTPRINT BY 30% BY 2030

Aim for carbon neutrality by 2050

ACT TO LIVE IN HARMONY TOGETHER

MANAGEMENT ENVIRONNEMENTAL
All our sites are ISO 14001 certified.

Our factories in Moirans (head office), Saint-Etienne-de-Saint-Geoirs (logistics platform), Artes (production) and Nevers (Look) use 100% clean electrical energy.

MADE IN EUROPE
715 kilometers is the maximum distance between our factory and the logistics centre.

Our Poplar wood cores have PEFC™ certification, a label guaranteeing sustainable management of forests.

Development of products with a reduced impact by using recycled materials where possible.
