100 YEARS MADE IN GERMANY

Vökl,

100 years of creating, developing, testing, producing, marketing, racing forward, selling fun, adrenaline, joy, unforgettable moments, irreplaceable time with family and friends, excitement, Olympic medals, World Championships, durable products, sustainable initiatives and most of all: **smiles**.

Your Vökl Team is dedicated to do what we do best: helping skiers to be their best on snow.

We hope that you enjoy this brief collection of facts & impressions of 100 Years of Vökl!

Keep on racing, shredding, jumping, touring, and of course: smiling!

Your Vökl Team

TAILORED TECHNOLOGIES

WHAT IS A »TAILORED TITANAL FRAME«?

TAILORED FIBER PLACEMENT

One of our latest technologies is Tailored Fibre Placement. In this innovative manufacturing process the Tailored Carbon Tips are produced by embroidering the individual carbon fibers onto a carrier material.

This allows them to be positioned exactly along the stress lines, opening up plenty of possibilities, for performance at the front of the ski, which has a decisive influence on the handling of the ski. The stiffness, torsion and thus the skiing characteristics can be specifically adjusted via the fiber thickness and millimeter-precise alignment. In this way, the fibers guide the dynamics to the areas of the ski where they are needed. The visibly integrated Tailored Carbon Tips are light, allow an agile shovel reaction with less effort and quickly build up energy. The Tailored Carbon Tips thus reach a next level of precision, direct tip response and active skiing pleasure.

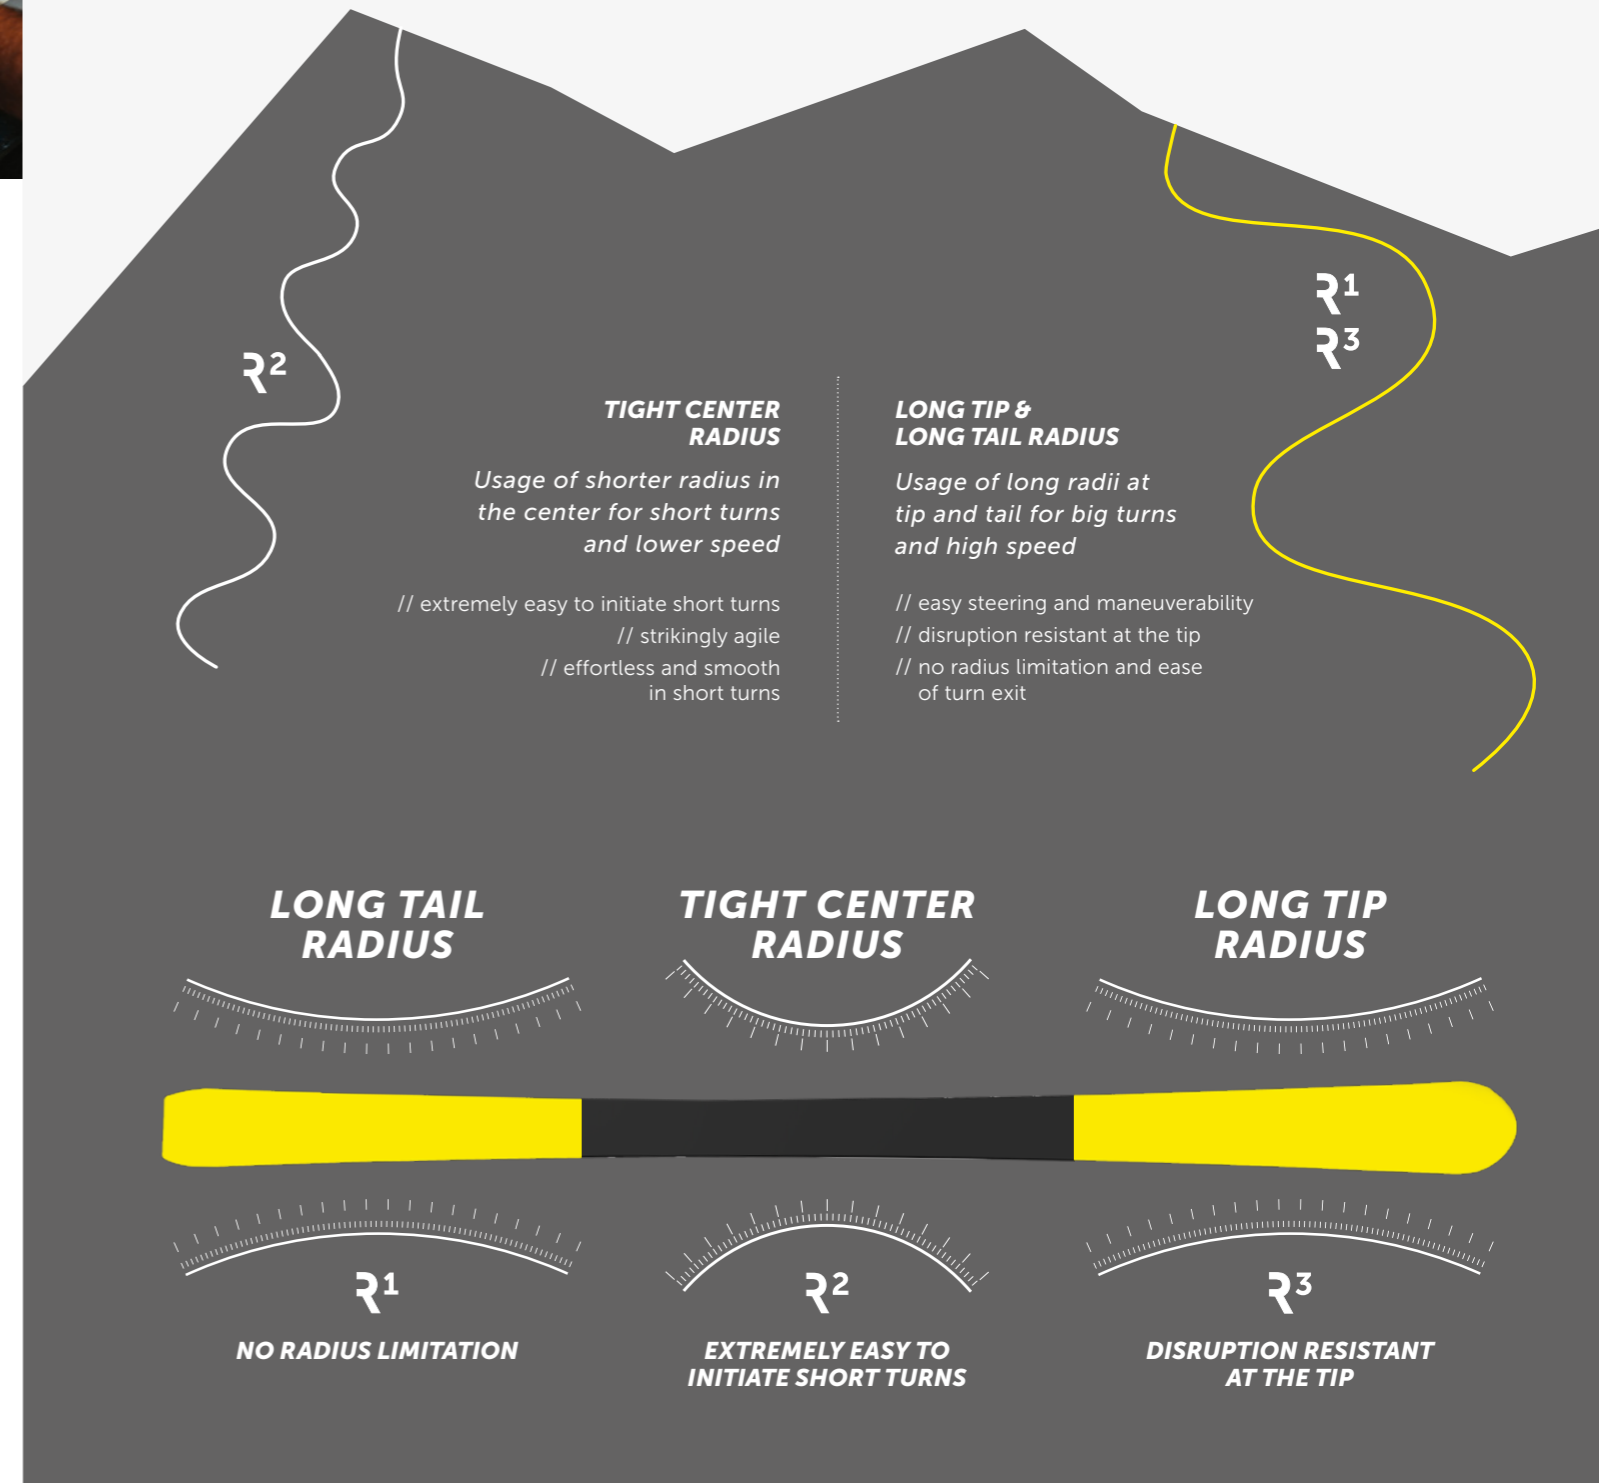

TAILORED TITANAL FRAME

In this technology the width of the titanal frame is adapted exactly to each individual ski length.

This results in Tailored Titanal Frames, which are positioned above the sidewall along the tip and tail area of the ski to provide the desired damping and torsional stiffness. The size of the frames is tailored to the skier's height, skiing ability and power. This means that longer ski models have a higher titanal content for more stiffness, more direct power transmission and stronger dampening. The shorter the length, the lower the titanal content, which makes the ski more agile, so that smaller, lighter and less powerful skiers can use the full potential performance of the ski. In addition to the Tailored Titanal Frames, a second, thinner titanal layer is located in the binding area, which gives the ski the necessary strength, but also agility. The result: the Tailored Titanal Frame technology provides an incomparable combination of agility and high speed control.

3D RADIUS SIDECUT

Three radii in one ski for maximum turning & speed versatility in all mountain skiing

WOODCORES

CHARACTERISTICS	MATERIAL BENEFIT	MULTILAYER WOODCORE	MULTILAYER WOODCORE LIGHT	HYBRID MULTILAYER WOODCORE	WORLD CUP ASH WOODCORE	WORLD CUP WOODCORE
	<p>MULTILAYER WOODS</p> <p>A combination of lighter, softer poplar wood and heavier, stronger beech wood provides a target group specific combination between light weight, strength, durability and damping: The beech typically concentrates where the most power is needed in the ski - like under the binding or alongside the edges and sidewalls.</p>	X	X	X		X
	<p>ISOCORE</p> <p>The addition of ISOCORE to the wood core helps to save weight and support dynamics, pop and agility.</p>			X		
	<p>SLOTTED</p> <p>Slots that get milled into the wood cores - with the number of slots varying according to the target group of the ski - helps to save weight and optimize the flex pattern towards a softer characterisitc.</p>		X	X		
	<p>ASH (%)</p> <p>Ash - the wood of the gods in ancient times - provides the best dynamic properties of any woods in skiing. At the price of heavier weight, a maximum of power transmission and dynamics can be found in skis with ash cores.</p>				100%	50%

ROCKER CONSTRUCTION

Our rocker construction is directly integrated into the production cycle, so the rocker shape doesn't need to be bent afterwards, which makes the matching between the rocker and the other components much more harmonized and precise:

- // easier turn initiation
- // effective edge length extends when putting the ski onto the edge
- // additional uplift for off-piste skiing

Full Rocker
Character: The ski is bent at a constant curvature along its entire length

Tip & Tail Rocker
Character: Bends up only in the shovel and tail zones, with a camber shape in the middle

Tip Rocker
Character: Only bends upwards in the shovel area, while the middle and tail of the ski feature a camber shape

ASH WOOD CORE

The high-quality core made of solid ash, which extends over the entire length of the ski, is a technical highlight that has great impact on the skiing characteristics.

The particularly elastic hardwood has only been used in racing skis for World Cup athletes and acts as an energy accumulator: while the ski flexes when initiating the turn, the fibers stretch and absorb the tension energy. At the exit of the turn, this accumulated energy is released, giving the ski enormous dynamics. Due to the specific stretching behavior of ash, the ski also adapts optimally to the surface. This results in the greatest possible stability and reliability, which makes the ski particularly smooth.

GREEN CORE

- // All GreenCore woods are FSC certified
- // Environmentally friendly glue
- // Foam: recycled PET

GREEN CORE

RMOTION 3 GW

Exclusive Marker Vökl plate-binding system for our new on-piste skis

- BENEFITS**
- // Smooth & consistent drifting at moderate speed
 - // Tighter turns with less efforts at higher speeds

NEW PARTS

DEDICATED BASE STRUCTURES

Vökl invests millions in a new base structure machine. Why?

POLISHED SKI BASES ENHANCE ...

- ... greatest gliding characteristics
- ... optimal base treatment options
- ... long lasting effects

DEDICATED SKI BASE STRUCTURES HAVE A STRONG EFFECT ON ...

- ... agile, precise & reliable turn initiation
- ... tighter turns with less efforts
- ... smooth drifting

After one year of intense testing we defined the following dedicated base structure for the relevant target groups / areas of use:

ZEBRA STRUCTURE

on system / premounted skis with **narrower widths**

BRUSHED STRUCTURE

on flat skis with **wider widths**

STRUCTURE DEPTH

superficial —●— pronounced

Very pronounced & deep structure to offer the best possible precision & steering characteristics for an on-piste ski.

superficial ●— superficial

Superficial & shallow structure matches with wide skis and their bigger bearing face > optimum agility & turning characteristics.

SMART SKINCLIP

The innovative Smart Skinclip system allows the ski tourer to decide for himself, depending on the situation, in which direction he should pull the skin on and off.

A standard snap hook at the tail end of the ski allows the skin to be attached and detached from behind. The skin can, however, also be pulled on and off quickly and easily from the front. This new flexibility is made possible by an elastic snap hook, which is also easy to grip with gloves. A subtle depression in the ski tip gives the hook lateral guidance and prevents it from unintentionally releasing the skin while walking.
